

With electronic control

The Swienty automatic turntable Ø100, combined with one of our DANA api MATIC filling machines (110053/110010) allows for an effective optimization of your production. The filling station stands on wheels and can easily be adjusted if needed.

The table can be adapted for different glass diameters and heights.

The turntable consists of a stand with tabletop made from stainless steel. This is combined with a rail, that divides the tabletop up into two sections: a feeding and a collection zone.

The jars are placed in the feeding zone and are automatically guided under the filling machine. After they have been filled, they are guided into the middle of the turntable.

Technical Data

Measurements:	Diameter 100 cm
Rotation speed:	variable from 1 - 12 RPM
Table capacity:	48 glasses
Power supply:	85 - 264V
Power consumption:	184 W
Weight:	60 kg
Height:	83 cm to tabletop
Item#:	110755
Tariff code:	8422 3000
Packaging:	1 pcs
